

NOTICE

Contract C-610J
2025/26 Pavement Slurry Seal Project

WE WILL BE WORKING ON YOUR STREET ALONG WITH OTHER STREETS IN YOUR AREA.

As part of the Towns Pavement Maintenance Program **AMERICAN PAVEMENT SYSTEMS** and its **subcontractors** will be placing a micro/slurry seal on your street and/or adjacent streets in your neighborhood. Micro/slurry seal is one of the most efficient and economical ways of resurfacing and maintaining your streets. This project is set to start on June 1st 2026 and end by the end of August 2026.

Work on individual streets is expected to last only one day, weather permitting. Slurry Seal consists of an asphalt seal applied to the existing roadway. The Slurry Seal typically cures within 4 to 6 hours.

There will be flagmen and other workers directing traffic to ensure the safe passage of all citizens and for the safety of our workers. Expect some delays, and choose alternate routes, if possible. The hours of construction will be from **8:00 AM to 4:00 PM**

Your street may be closed to through traffic during the Slurry Seal process.

Streets that are to receive treatment will have "No Parking" signs placed along the street at least 48 hours prior to the work being started. These signs will have specific dates and times that all parking on the street will be restricted. If your street is not completed on the date indicated, it will be done at a later date. **ANY CARS PARKED WITHIN THE POSTED AREA ON THE DAYS OF THE SLURRY SEAL PLACEMENT MAY BE TOWED AT THE OWNERS EXPENSE.**

Important Notes:

- Do not drive on the surface treatment until streets have been reopened to traffic or directed by a flagger
- Please maintain low speeds while traveling through the work area.
- Garbage pickup will not be affected. Please place your trash bins on top of the curb.
- Please do not water your lawn on the days listed on the "No Parking" or the night prior.
- Access to driveways may be temporarily restricted during placement and curing operations.

The oil used in the Slurry Seal placement can and will stain your carpets, floors, and other related items if traveled through before it has had time to cure. If you do have oil on something, simple dish soap and water will clean the area if caught before the oil has had time to dry. Otherwise, we recommend a citrus solvent type cleaner. If you have any questions, there will be a representative on the job site.

If rain is forecasted on the day your street is scheduled to be resurfaced, we will reschedule the work and look for barricades with updated dates
